Wallet Hierarchy Flow Proposal

Overview

This document proposes the wallet hierarchy and transaction flow for the TMS wallet system. The goal is to clarify how balances are shared between Main Providers, Sub-providers, and ticket variants.

Please review the scenarios below and confirm if the proposed flow is correct before implementation.

Proposed Wallet Structure

1. Main Provider Wallet Sharing

- A **Main Provider** owns the wallet balance.
- **Sub-providers** under a Main Provider can transact, but the balance is deducted from the Main Provider's wallet.
- Sub-providers do **not** need their own wallets.

2. Variant-Specific Wallets

- A Main Provider or Provider can have **ticket variants** (e.g., Red, White).

- Each variant can have its own wallet balance.
- Transactions for a specific variant deduct from that variant's wallet.

Scenario 1: Main / Sub-provider Wallet Sharing

Initial Balances

Provider	Type	Wallet Balance
VIA	Main Provider	₱50,000.00
PAL	Sub-provider of VIA	No wallet
Cebu Pacific	Sub-provider of VIA	No wallet

Transactions

Transaction	Operating Provider	Amount	Deducted From	New Balance
POS sale	PAL	₱10,000.00	VIA wallet	VIA: ₱40,000.00
POS sale	Cebu Pacific	₱5,000.00	VIA wallet	VIA: ₱35,000.00
POS sale	VIA	₱5,000.00	VIA wallet	VIA: ₱30,000.00

Expected Result

- PAL and Cebu Pacific do not have their own wallets.

- All transactions by PAL and Cebu Pacific are charged to VIA's wallet.
- VIA's final balance after the three transactions is **₱30,000.00**.

Scenario 2: Variant-Specific Wallets

Initial Balances

Provider	Variant	Wallet Balance
Cokaliong	White	₱10,000.00
Cokaliong	Red	₱10,000.00

Transactions

Transaction	Provider	Variant	Amount	Deducted From	New Balance
POS sale	Cokaliong	White	₱2,000.00	White variant wallet	White: ₱8,000.00
POS sale	Cokaliong	Red	₱3,000.00	Red variant wallet	Red: ₱7,000.00

Expected Result

- White variant sale deducts from the White variant wallet only.
- Red variant sale deducts from the Red variant wallet only.
- Variant wallets do not share balances with each other.

Summary

1. **Main Provider wallets can be shared** with Sub-providers.
2. **Sub-providers do not need their own wallets** to transact.
3. **Variant wallets are separate** and transactions for each variant deduct from that variant's own balance.
4. **No cross-variant or cross-provider sharing** except through the Main / Sub-provider relationship.

Management Approval

Please confirm:

- ☐ The proposed Main / Sub-provider wallet sharing flow is correct.
- ☐ The proposed variant-specific wallet flow is correct.
- ☐ We can proceed with implementation.

If any scenario needs adjustment, please provide feedback before development begins.
